Google Developer Student Clubs

University of the Western Cape Lead

Short Biography

My name is Jessica Randall. I am currently doing my honors in Pure Mathematics. I am interested in solving diverse problems in different fields using Mathematics and various technologies. My interests include exploration of new technologies and how they could be used to solve the world's greatest problems. I enjoy reading about scientific discoveries and watching documentaries. I value leadership and aspire to lead to the best of my ability. My aspiration is to touch the individuals I get to meet through this journey.

My goal

To inspire young minds to be innovative and creative with their creations. To keep the resilient mindset in the field of developers. To expose them to big projects and projects on the scale that companies like Google address. Projects that are diverse and in different fields. To provide workshops on Google technologies and how useful they are to the projects they could be doing in the future. My aim is for this club to be inclusive of all fields as anyone can be a developer.

My role

My role as a lead is to provide support and encouragement to members with their aspirations, projects, and pitches. I would be leading them through the various Google technologies and providing exposure to projects or concepts that use them. I will be trying my best to get speakers that will provide relevant skills needed to be a successful developer. I would be responsible for introducing Google technologies, how to use them and creating challenges as well as co-hosting hackathons with other leads that our students can join.

My responsibilities

To act as a liaison between Google and my university. To represent Google at my university. To promote Googles events and competitions at my university. Promote Google technologies and products. To build relationships with faculty and students on behalf of Google.
